Rajput - Free Download HEAT AND MASS TRANSFER - webserver.dmt.upm.es PART 3 INTRODUCTION TO ENGINEERING HEAT TRANSFER Figure 1.1: Conduction heat transfer The second heat transfer process is convection, or heat transfer due to a flowing fluid. The fluid can be a gas or a liquid; both have applications in aerospace technology. In convection heat transfer, the heat is moved through bulk transfer of a non-uniform temperature fluid. Modes of Heat Transfer - (Conduction, Convection, and ... It is defined as the transfer of heat by means of molecular agitation within a material without any motion of the material as a whole. 2. Convection: In convection, the heat or energy is transferred by mass motion of fluid which might be air or water when heated fluid is caused to move away from the source of heat-carrying energy with it. Example: When the heat is provided to water at the bottom the pot is heated, the water particles move faster, and they also move farther apart. Transient Heat Conduction - SFU.ca Consider a body of arbitrary shape of mass m , volume V , surface area A , density ρ and specific heat C_p initially at a uniform temperature T_i . Fig. 1: Lumped system analysis. At time $t = 0$, the body is placed into a medium at temperature T ? ($T > T_i$) with a heat transfer coefficient h .
